Also, when I checked the test results I noticed that some scores have a flag after them. What does the flag signify?

Hi Nancy,

Sorry for the delay in getting back to you.

The flags are a button present on each quiz question, as shown below. The person writing the quiz would have had to have clicked on it for each question.

It's possible that someone else logged in with the student's username and password from elsewhere, but I don't have enough evidence to confirm that. I don't know if they have something on their device that would make their IP address indicated as something else. I would recommend checking with IT Services to see if they can provide any insight.

I did look at the rest of the student's logs. The IP address that starts with "104" is the only IP address that logged into Moodle on the day of the quiz. If the student was logged in in the classroom while someone else was also logged in as them, I would expect to see another IP address. That said, that IP address doesn't appear anywhere else in the student's logs, which is odd.

I hope IT Services can provide some more insight as I'm sure they're more knowledgeable about how IP addresses work, but if you have any further questions about interpreting the Moodle logs please let me know.

Best,

Brad

Changed Status from **New** to **Open**.

Hi Nancy,

Was the student present in class? When I enter the IP address in a locator tool, this is what I see:

The "Apple iCloud Private Relay" seems to be a feature of Apple products that can be used to protect a user's IP address. I'm not suggesting the student was up to anything nefarious. They may just use the feature for privacy reasons. I'm not very familiar with it, however, so I would recommend reaching out to IT Services to ask if they can provide any insight.

The flagged questions would have been manually flagged by the student while they were writing the test – there is a flag icon next to each question. They can be used as a way to mark questions to return back to, or flag potential problematic questions for the instructor. I don't think there are any issues there.

Best,

Brad

Hi Brad,

Yes, the student was in class.

He showed me that he was on Eduroam. But his IP is different from anyone else in the class. He is also the student with all the flagged questions (every single one which is also curious), and he got almost all the multiple choice correct.

During lecture sessions and labs when he is using his computer it is connected to the university wifi 206.123.191—even when he did the practice quiz. But, when he was doing the test he was off (or

someone was coming in from) another IP.

Is it possible for a student to appear to be doing the test but someone else is actually doing it for them remotely?

Thanks,
Nancy
